

Collaborate more securely

Privacy, security, and compliance in Microsoft Teams

We take a comprehensive approach to deliver an enterprise-grade communication and collaboration experience.

Safeguarding your privacy by design

Our approach to privacy is grounded in our commitment to giving you transparency over the collection, use, and distribution of your data.

Get access to advanced security capabilities

Your data is protected from malware in attachments, accidental sharing via chat or files, and suspicious user activity. Information is secure with encryption, multi-factor authentication, and device management.

Support for more than 90 regulations and standards

Administrators control what happens with business data. Easily address conflicts of interest, harassment, and legal inquiries with capabilities like information barriers, communication compliance, e-discovery, and legal hold.

Manage it your way

Microsoft Teams is designed with IT in mind, providing management capabilities for collaboration, messaging, meetings, calling and apps in one place with simple administration.
