

# Bot Platform: Build and connect intelligent bots

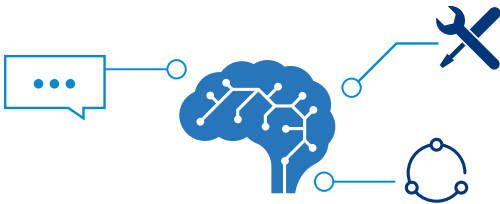

## Microsoft AI

Microsoft's AI approach leverages intelligent technology to augment human capability — all while maintaining clear ethics and security. We focus on human-centered design to better our communities' lives and strive for the impossible.

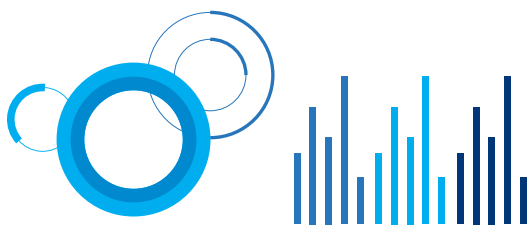

## Microsoft Bot Framework

Microsoft Bot Framework enables you to build and connect intelligent bots to interact with your users naturally wherever they are — from your website or app to Cortana, Skype, Teams, Office 365 mail, Slack, Facebook Messenger Skype for Business and more...

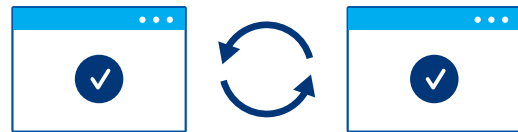

### Smart bots start here.

Open source Bot Builder SDKs allow you to build simple to sophisticated dialogs; Cognitive Services enable your bot to see, hear, interpret and interact in more human ways.

### Reach 145 million monthly users with Cortana.

Create a new Cortana skill and let users engage with your software more naturally. Build skills that work across Windows 10, Android, iOS and soon to be released Cortana devices.

### Connect cross platform with the flip of a switch.

Your users talk in many places; your bot should too. The Connector will have your bot talking in full fidelity on the most popular conversation experiences, no additional coding necessary.

### Your customer is your business, keep it that way.

Do you have an app? A website? Of course you do! Bring the conversation to it with Direct Line; embed the customizable Web Chat control or roll with your own.
