

At Microsoft, we call our IoT solutions the Internet of Your Things, because we believe that the IoT begins and is built with your things. Integrate your existing devices and systems with IoT solutions by adding sensors to create smart devices.

Microsoft gives you the flexibility and scalability to control, monitor, and manage your things, allowing you to capture real-time data that can be applied to uncover new business insights. Using advanced analytics, these insights can be transformed into tangible actions that can help you generate better customer experiences and new revenue streams.

Get started with Microsoft IoT solutions

Remote Monitoring

 <p>Access, analyze, and use previously untapped data.</p>	 <p>Connect and track assets in real time and automate business processes.</p>	 <p>Trigger automatic alerts and actions.</p>	 <p>Enable remote diagnostics to increase efficiency and decrease cost.</p>
