

# Why Microsoft for **risk analytics workloads**?

**Ability to meet enterprise requirements** for configuring Azure and securely integrating data for use by risk analysts

**Highly experienced data scientists and financial services industry architects** with an understanding of financial services challenges for assignments that include AI and modeling

**Expertise and understanding of the latest Azure features and roadmap** for data platform and analytics tools, plus the ability to work with the range of Open Source and Azure-specific data platforms

**Can work closely with Microsoft Premier Support** to ensure solution supportability when an engagement includes operations readiness

**Experience in hybrid configurations** that work well in financial services industry scenarios
